

Water Level Controller 水位控制器

Water level controller refers to the mechanical or electronic method to detect high and low water level once detected abnormal will control the elevator to the highest level, can effectively ensure the safety of people in the elevator.

水位控制器是指通过机械式或电子式的方法来检测高低水位的一旦检测到异常将控制电梯升至最高层，可以有效的使电梯内的人得到安全保障。

Product characteristics产品特点

- 1 Adopt microprocessor to reduce battery consumption.
简易安装
- 2 Adopt multi-channel control output to realize multi-function of product.
智能控制
- 3 Adopt aluminum alloy housing, featuring light weight, appealing appearance and convenient installation.
功能实现多种方式联动

Technical Parameters 技术参数

Model 型号	SGSJ-10
Input voltage 输入电压	12V-36V
Normal temperature 正常温度	-25°C-45°C
Waterproof Rate 防水等级	II 级
